

IWS PROJECT WEEKLY PROGRESS REPORT – 4

The task for this week was to get done with creating a questionnaire form that the user needs to fill out based on which we are going to process the data and give out an output which suggests the user if EV is meant for them or not.

I created an HTML page as you can see in the screenshot below. I plan to welcome the user with his/her name and list out a set of questions to answer based on which we process and give out an output.

The screenshot shows a web form with a dark blue header containing navigation links: HOME, ABOUT, FACTORS, CUSTOMIZED REPORT, LOGIN, and SIGN UP. Below the header, a message reads: "Hello {{USERNAME}}, welcome to the customsied report section of our tool. Please answer a quick questionnaire below and our tool will help you decide if buying an electric vehicle is the right option for you or not." The form itself is a light blue rounded rectangle with the following questions and input fields:

- What is your primary purpose of owning a car?
- Is the electric vehicle going to be your primary or only car?
- Average Miles Driven Per Week
- How much are you willing to spend on the car?
- What is your location?
-

I will be adding little more functionality to both the HTML web pages I have already designed and then start linking this to the backend.
